

Bird Repeller Laser

Introducing the latest development in bird deterrent technology:

These mounted bird lasers are ideal scare devices for deterring birds from domestic, commercial, industrial and agricultural situations – day and night!

Pest birds in a wide variety of species are frightened by the intense spots and beams of the various AvePro Laser units. Local and International use indicates that pest birds do not become accustomed to the constantly moving beam and laser patterns.

To install, simply mount the laser and adjust the sweeping laser patterns over the area of bird activity. This could be the beam structure of a roof, an open area of land or over an agricultural crop.

Each AvePro Bird Repeller Laser is supplied with a Remote to help customise the laser patterns over your unique building or orchard layout.

Long-Term bird deterrence:

The principle of repelling birds with laser patterns is inspired by nature. Birds perceive the approaching laser beam as a physical danger. It appeals to the survival instinct, causing the birds to fly away. The continuous presence of the moving laser beam is a valuable tool for many bird species under low light or night-time conditions.

Configuration:

13-APLX-44P	AvePro Bird Repeller Laser Light for Outdoor	100mW	Class 2
13-APLX-45P	AvePro Bird Repeller Laser Light for Indoor	1mW	Class 3R
13-APLX-45P-5	AvePro AG Laser Bird Repellent with Rotator	1000mW	Class 3R

Bird Repeller Laser

AvePro Bird Repeller Lasers have a wide variety of uses:

- Easy to deploy most industrial and agricultural situations,
- Safe for humans when used correctly,
- Ethically and humanely deters pest birds,
- Weather resistant (IP65 rated),
- Low running costs,
- Permanent and automated solution,
- Low environmental impact: no noise or poison and no pollution,
- No habituation: birds do not get used to the laser beam,
- Deters a wide variety of pest bird species.

Varied laser patterns for indoor applications

Strong patterns for agricultural areas

Laser Bird Repeller uses laser technology at random intervals in red and green color combinations birds hate, forcing them to find calmer landing areas
