BRC

CLEAN EFFICIENCY

BRC, a French manufacturing company created in 1943, designs, produces and markets reliable insect traps, hygiene equipment, and air comfort and air control devices.

In its efforts to constantly improve its products and services, BRC makes customer satisfaction the focus of its business activities and has been doing so for over 70 years. Its values are based on quality, innovation and commitment. All BRC product ranges are manufactured in France and comply with European standards (CE marking) and HACCP recommendations.

The BRC team is proud of its continuous collaboration with French and European suppliers, and of its contribution to the local economy, as well as to supporting jobs and creating employment in France. As a company steadfast in its environmentally friendly approach, BRC is committed to designing sturdy, sustainable products.

As a means of staying attuned to the needs of its customers, this guide is offered with a full explanatory introduction to the BRC product range, including recommendations specific to each activity sector in order to better address all requirements, as well as information relating to technical information and standards.

For further information, go to: www.brca.com

Introducing the **5** ACTIVITY SECTORS

In order to meet your exact requirements, we have broken down our markets into activity sectors.

This breakdown provides explanations for product references with the technical features and advantages best suited to your environment.

For example, we recommend the IP54 international protection rating for an insect trap installed in an environment exposed to splashing water, such as the food processing industry.

You will find on the following pages a list of devices recommended for each activity sector, as well as recommendations for applicable locations.

These 5 sectors are represented by icons:

-  **DOMESTIC sector**
-  **BUSINESS, ADMINISTRATION, MEDICAL/SOCIAL sector**
-  **HOSPITALITY & CATERING sector**
-  **AGRICULTURE sector**
-  **MANUFACTURING sector**

Catalogue **GUIDE**

Main theme: INSECT CONTROL

Product category: insect traps

Product range: PG40LB, CAPTURE

Icons for ranges relevant to the sectors: Business, Administration, Medical/Social; Hospitality & Catering; Agriculture; Manufacturing

Icons for the characteristics: Made in France, warranty, CE, etc.

Icons for electric / glue: Electric power, glue

Table of technical data:

INSECT CONTROL

BRC insect traps are suited to all environments, including the harshest ones. Whether electric or glue-based, the insect traps offer the most reliable solution against flying insects, at a low operating cost. In fact, their effectiveness is based on the strong attraction of insects to the UVA fluorescent lamps. Their non-polluting properties and chemical- and odour-free features make them environmentally friendly, economical and durable.

Several criteria should be taken into consideration in determining what best fits your requirements.

Legend for icons:

Images of the options:

    	<p>Electrocution grid</p> <p>Glue board</p> <p>Protection rating</p> <p>304 stainless steel</p> <p>ATEX</p>	 	<p>Lamp or shatterproof tube</p> <p>Bracket</p>
--	--	--	---

Recommended installation plan for optimal effectiveness

	Electric insect traps	Glue board insect traps
Advisable	<ul style="list-style-type: none"> • At an interception point between the areas to be protected and insect entry points • Away from openings to the outdoors in order to limit competing UVA-rich sunlight 	
	<ul style="list-style-type: none"> • The peripheral areas helping to minimise the use of consumables 	<ul style="list-style-type: none"> • The areas near to food preparation
Avoid	<ul style="list-style-type: none"> • Dusty areas • Areas with air circulation 	
	<ul style="list-style-type: none"> • The areas near to food preparation 	

The device must be operated 24/7.

Light: a source of attraction for insects

The orientation of an organism or plant in response to light is known as phototropism. The response is stimulated either towards the light radiation (positive phototropism) for insects for instance, or towards the opposite direction (negative phototropism).

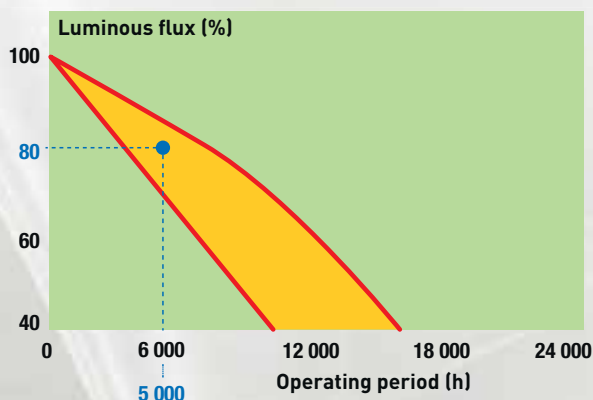

Insects are attracted by UVA radiation (between 315 and 400 nm), which has an attraction peak of 368 nm.

Philips photometric data

Lamps and tubes

The **average lifespan** of a lamp is 9000 hours. However, the luminous flux of a lamp gradually diminishes.

The **operating period** is equivalent to the number of hours after which a lamp no longer emits more than 80% of its luminous flux. This luminous flux is 5000 hours (6 to 7 months), or the period after which replacement of the lamp is recommended in order to maintain optimum efficacy.

The characteristics of the lamps and tubes used by BRC are as follows:

- Soft bluish light
 - Very high UV radiation: peak at 368 nm (wavelength at which the insects' eyes become sensitive)
 - Low in heavy metals (RoHS)
 - European know-how and European-manufactured
- Leading brand names: Philips® and Sylvania®

SYLVANIA
PHILIPS

SHATTER-PROOF

Whether optional or standard, the high-quality "shatter-proof" Teflon® (PTFE) casing prevents the risk of flying shards of glass yet maintains light intensity.

- 96.5% transmission of UV rays (and 89% of UVC rays)
- Highly resistant to extreme temperatures (+200° C) and harsh environments
- Lifespan of UVA lamps: 1 year
- Eliminates the risk of contamination from broken glass and mercury
- HACCP-recommended

ENERGY-SAVING BULBS, A REAL SAVING!

Did you know?

A 20 W lamp without the ferromagnetic ballast and starter has **30% more energy** than a tube.

Output	Length of use	Annual consumption	Cost (average price per kWh in France in 2015 = 0.14 €)
20 W lamp	365j 24h/24	175 kWh	24,50 €
20 W tube + ballast	365j 24h/24	263 kWh	36,82 €

How to choose the light source?

Area to be covered

The recommended output in Watts is calculated based on the surface area of the room.

Lamp or tube?

Economical and easy to replace, lamps are fitted with an electronic ballast.

Other uses:

Diazo printing machines, photo polymerisation, chemical processes, mineral detection, various technical applications.

Value scale:
20 W = 50 to 60 m²

Tubes are powered by ferromagnetic ballasts, which guarantee reliability and performance.

Ballasts

A ballast is an electrical component used to provide the necessary voltage for powering the lamp or fluorescent tube, while at the same time reducing the current in the electrical circuit.

There are 2 types of ballasts: electronic and ferromagnetic. The table below describes the advantages and disadvantages of their properties.

	+ the Advantages	- the Disadvantages
Electronic ballast	Energy savings.	Fragile components with little resistance to variations in voltage. Limited lifespan (between 5 and 6 years = 50,000 h).
Ferromagnetic ballast	Long-lasting components resistant to electrical disturbances. Long lifespan (between 10 and 15 years = + than 87,000 h).	Energy consumption.

BRC ballasts include ferromagnetic ballasts which, in combination with the starters, provide optimally reliable performance.

CELMA, Federation of National Manufacturers' Associations for Luminaires and Electrotechnical Components for Luminaires, has established the following classification of general types of ballasts:

Class	Description	System output
B2	Magnetic ballasts with low losses	≤ 43 W
B1	Magnetic ballasts with very low losses	≤ 41 W
A3	Electronic ballasts	≤ 38 W
A2	Electronic ballasts with reduced losses	≤ 36 W
A1	Dimmable electronic ballasts*	≤ 38/19 W (at 100% - 25%)

* Meeting the following requirements:
 - at a setting of 100% of luminous flux, the ballast meets at a minimum the requirements of class A3.
 - at a setting of 25% of luminous flux, the total power input is equal to or less than 50% of output when the luminous flux is set at 100%.
 - the ballast must be capable of reducing the luminous flux to 10% or less of the maximum luminous flux.

High-voltage transformers and electrocution grids

The combination of "the gap between the electrocution grids and the power voltage" ensures that the insect is electrocuted in an optimal manner.

The BRC high-voltage transformers are designed for strength and durability.

- The primary and secondary coils incorporate copper with a high-quality resin coating.
- They are TÜV-certified.

Cartridges

European-made and easy to use, the BRC cartridges are designed for resistance and durability. The plastic material of which they are made has excellent UV resistance.

Bed bugs

THERMOBUG®

Thermobug is an eradication process for bed bugs thanks to heat treatment. This process consist in raising temperature between 50 and 60 ° and allows to eradicate in one time eggs, larvae and adults. This technique respects environment and allows immediatly to use the handled zone. Applications : hotel rooms, homes, reception centers ...

CE
WARRANTY
1 YEAR

Directions

- Airblower for a better distribution heat.
- Use a data-logger to measure the temperature.

Optional

- An extention lead of 30 m (See Accessories on page 45).

THERMOBUG AIRBLOWER

THERMOBUG COMPACT

- Temperature regulation between 0 and 70°
- Silent and lightweight
- Water and dust resistant (IP54)

Code	Model	Output	Power supply	Weight	Dimensions L x H x W	Sound volume	Air circulation
TBCOMPACT		9kW	400V	17kg	46x68x59cm	53dBA	1800m³
TBBLLOWER		72W	230V	9,15kg	40x63x40cm	51dBA	700m³

Insect traps

IGLU®

Professional quality and totally discreet, outdoors as well as indoors: houses, apartments, garden patios, balconies, mobile homes, camping trailers, etc... IGLU is odourless and silent.

Directions

- Conseils Placement: install in a dim area to avoid
- For wall mounting: between and 2.20 metres from ground level.
- Servicing: replace the lamp annually and the glue boards every 2 months*.
- Pests: flies, mosquitoes, midges, wasps, horseflies, etc.

* If operating 24/7.
Average lifespan of a lamp: 9000 hours

Optional

- Customised designs with a minimum order of 57 units.
- All in inox.
- White glue boards.
- Mounting kit (page 45).
- Customization conditions for product (page 46).

- Design
- Odourless
- Silent
- Economic

Insect traps

GT[®]

As a decorative accessory, this wall lamp is designed with both private individuals and professionals in mind: homes, balconies, patios, mobile homes, camping trailers, offices, retail outlets, restaurant dining rooms, hotels, reception areas, doctors' and vets' surgeries, analysis laboratories, day nurseries, schools, retirement homes, etc.

Directions

- Mount as a wall lamp 1.80 to 2.20 metres above ground level and away from light sources.
- Servicing: replace the lamps/tubes annually and the glue board every 2 months*.
- Pests: flies, mosquitoes, midges, etc.
- Tip: the wall lamp is turned into a light source in winter by using a lamp for illumination (E14).

*If left on 24/7.

Average lifespan of a lamp: 9000 hours

Optional

- Customisable colours with a minimum order of 30 units.
- Customization conditions for product (page 46).

- Mounting kit included
- Attractive
- Discreet
- Odourless
- Wall-mountable
- Customization (page 46)
- Energy-saving lamp **

Insect traps

PG40LB

To assure total discretion, the PG40LB fits into false ceiling panels and is the ideal solution for offices, shops, businesses, restaurant eating areas, hotels, receptions areas, GP practises, veterinary practises, laboratories, nurseries, schools, retirement homes,...

Directions

- Position away from light.
- Positioning the unit in lieu of a 60x60cm ceiling plate.
- Set up the unit between the areas to be protected and the insect entry points.
- Servicing: replace the lamps annually and the glue board every 2 months.
- Pests: flies, mosquitoes, midges.

*If left on 24/7.

Average lifespan of a lamp: 9000 hours.

Mounting kit included (earthquake protection chain).

Optional

- Shatterproof lamp.

- Modern design
- Simple and fast maintenance
- Energy-saving lamp highly attractive
- White-coated finishes

Insect traps

CAPTURE®

Recognised for its fiability, the CAPTURE is suited to service industry environments: retail shops, kitchens, changing rooms, refuse rooms, offices, doctors' and vets' surgeries, analysis laboratories, hotels, reception areas, day nurseries, schools, retirement homes, etc.

Directions

- For wall mounting: 2 metres above ground-level.
- Position away from light.
- Mount 2 to 3 metres above ground-level between the areas to be protected and the insect entry points.
- Servicing: replace the lamps annually and the glue board every 2 months.
- Pests: flies, mosquitoes, midges, moths, wasps, etc.

Optional

- Shatterproof lamp.
- Bracket (See Accessories on page 45).
- Customization conditions for product (page 46).

- Modern design
- Montage kit and chain supplied
- 360 ° discharge
- Inox 430
- Ferromagnetic ballasts: long-lasting and reliable
- Customization (page 46)

Inoxtrap IP20

Directions

- Position away from light.
- Attach to wall (bracket) or suspend (chain)
- Mount 2 to 3 metres above ground-level between the areas to be protected and insect entry points.
- Servicing: replace the tubes annually and the glue board every 2 months.
- Pests: fruit flies, flies, mosquitoes, wasps, moths, etc.

Optional

- 316 stainless steel.
- Wall mounted bracket (See Accessories on page 45).
- Customization conditions for product (page 46).

- Maximum protection: **PHILIPS** shatterproof tubes or SYLVANIA
- Highly resistant to corrosion and rust
- Sealed against water and particles (for the IP54 version)
- Ferromagnetic ballasts: long-lasting and reliable
- Removable insect collection tray (electric version)
- Stainless steel chain included

Insect traps

AGR[®]

Designed entirely in stainless steel, the AGR is ideal for use in the food-processing and chemical industries, and for agricultural, wine-producing and horticultural operations.

Directions

- Position away from light.
- Mount 2 to 3 metres above ground-level between the areas to be protected and insect entry points.
- Servicing: replace the lamps annually and the glue board every 2 months.
- Pests: fruit flies, flies, mosquitoes, wasps, moths, etc.

Optional

- IP54.
- 316 stainless steel.
- Bracket (See Accessories on page 45).
- Customization conditions for product (page 46).

- Maximum protection: **PHILIPS** shatterproof tubes
- Highly resistant to corrosion and rust
- Sealed against water and particles (for the IP54 version)
- Ferromagnetic ballasts: long-lasting and reliable
- Detachable insect collection tray (electric version)
- Attraction surface area: between 80 and 240 m²
- Stainless steel chain included

GLUE BOARDS

Glue boards are used for trapping flying insects attracted by the UVA rays of the lamps.

- Effective
- Easy installation
- Maximised insect capture
- 60-day glue board performance
- Resistant to UVA rays, dust and temperatures [$\leftarrow +60^{\circ}\text{C}$]
- Single-sided or double-sided
- Detachable protective silicone sheets
- 3 colours: yellow, black, white
- Grided for easier counting
- Standard dimensions or dimensions specific to the insect traps
- 100% recyclable cardboard
- Easy maintenance

2 MATERIALS AVAILABLE

• Cardboard (single-sided or double-sided)

An economical base for dry environments.

• Correx (single-sided or double-sided)

Correx® is a double-layered extruded polypropylene board (ribbed or corrugated). It is lightweight, solid, durable, resistant to humidity, low temperatures, chemical components (harsh environments), is recyclable and non-toxic.

Colourful boards!

- The colour **yellow** attracts (the stamen or central part of petals) attracts insects. This attraction would appear to be associated with young developing leaves, which are richer in nitrogen and therefore of a potentially better nutritional quality for insects (Source: INRA)
- **Black** disguises the insects stuck on the board.
- **White** magnifies the intensity of light through reflection, and thus the attraction to insects!
- The **grided** design is an aid to counting and identifying the insects.

Recommendation:

For optimal effectiveness, the glue boards should be replaced **at least every 2 months**, or more regularly if there is infestation.

GLUETRAP®

GLUEBOARDS ARE SOLD BY 6.

HYGIENE EQUIPMENT

The germicidal power of UV-C radiation

Energy-saving UV-C radiation (254 nm) lamps produce a strong germicidal effect on utensils cleaned beforehand and placed on the basket rack or magnet.

The high-energy germicidal rays they emit produce a photochemical effect on the thymines (one of the four bases found in the DNA helix) causing the DNA molecule to break up.

This modification of the molecule damages the cell membranes and nuclei of microorganisms (spores, fungi, mould, etc.), inhibiting their growth and reproduction, and resulting in their destruction.

Icon legend:

304 stainless steel

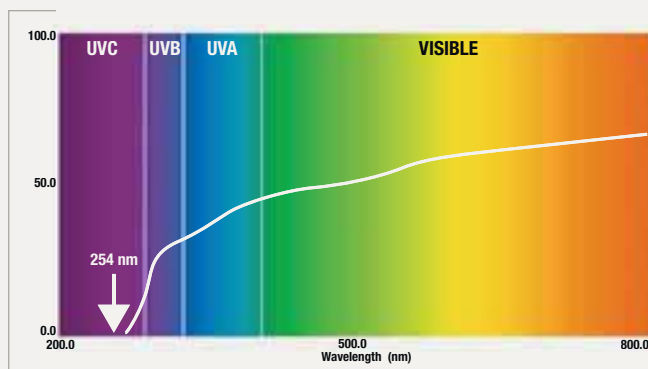

UV-C radiation is harmful to the eyes
Be careful never to look directly at the lamps.

In order to protect the user from UV-C radiation, BRC has designed sterilisation cupboards with the following features:

- The stainless steel structure conceals the fluorescent tube.
- Radiation of up to 254 nm emitted from the tube is absorbed by the 3 mm-thick polymethylmethacrylate (PMMA) plate.
- A contact switch automatically turns off the lamp when the door is opened

Percentage of radiation from the tube passing through the PMMA plate

Light filtered (in wavelengths) by the PMMA plate in the cupboard.

INFO: The shatterproof (Teflon®-clad) UV-C lamps must be replaced once a year.

Sterilisation cupboards

In compliance with HACCP procedures, stainless steel sterilisation cupboards are recommended for ensuring that kitchen knives are hygienic. The germicidal UV-C radiation lamp sterilises the knives.

Applications: Food outlets (bakery, butcher's shop, delicatessen, caterers, fishmongers, etc.) cafeterias, fast-food restaurants, mass and conventional catering, bars, OT, agricultural production, etc.

Directions

- Mount on wall at shoulder height.
- Servicing: replace the lamps annually.
- Utensils: knives foil, sharpening steel, platters, etc.

Optional

- 304 or 316 stainless steel.
- Lock (see Accessories on page 45).
- Stainless steel door + lock.
- Shatterproof tubes or lamp.

Large-sized sterilisation cupboards

In compliance with HACCP procedures, large-sized sterilisation cupboards are designed in stainless steel and suitable for "king-sized" utensils such as butcher's and cheesemonger's knives. Once magnetised, the utensils are sterilised by the germicidal effect of the UV-C lamps.

Applications: Food outlets (bakery, butcher's shop, delicatessen, caterers, fishmongers, etc.), cafeterias, fast-food restaurants, mass and conventional catering, bars, OT, agricultural production, etc.

Directions

- Mount on wall at shoulder height.
- Servicing: replace the lamps annually.
- Utensils: cheesemonger's knives, butcher's knives, fishmonger's knives, foil, sharpening steel, platters, etc.

Optional

- 304 or 316 stainless steel.
- Lock (See Accessories on page 45).

- Specially designed for large knives up to 80 cm long
- 100% germicidal
- Arrangement: basket or magnetic bar
- Capacity: 15 to 20 knives
- Disinfection timer: 120 minutes
- Highly resistant to corrosion and rust: austenitic stainless steel (304)
- Easy to clean
- Storage for utensils

Hand sinks

These all-in-one hand sinks are essential for all food outlets and kitchens. Designed in stainless steel and fitted with a knee-operated pressure control device, they meet the requirements for HACCP procedures.

Applications: Food outlets (bakery, butcher's shop, delicatessen, caterers, fishmongers, etc.), cafeterias, fast-food restaurants, mass and conventional catering, bars, OT, agricultural, wine-producing and horticultural operations, food-processing industries, pharmaceutical applications, etc.

Directions

- Mount on wall at shoulder height.

Optional

- Soap dispenser (See Accessories on page 45).
- Brush (See Accessories on page 45).
- Rubish (See Accessories on page 45).
- Customization conditions for product (page 46).

- Highly resistant to corrosion and rust: austenitic stainless steel (304)
- High splashback: accessories installed (soap dispenser, nail brush, etc.)
- Time-out: 15 seconds
- Ergonomically designed
- Easy to mount (template provided)
- Customization
- Easy to clean
- Health Compliance Certification (Eurofins)
- Mixer hot and cold water

*Option of engraved/cut-out image (logo, design) on the sink apron for all minimum orders of 20 units.

Customization:
see conditions page 46

Code	Model	Time-out	Weight	Dimensions L x H x W
LMC	Standard hand sink, 304 stainless steel	15"	3kg	40x41,8x37,8cm
HYGILMC	Hand sink with apron, 304 stainless steel	15"	7kg	40x52x33cm
HYGILMCP	Handsinks bins	15"	7kg	40x52x33cm
HYGILMCBS	Handsinks brush and soap dispenser	15"	7kg	40x52x33cm
HYGILMCPBS	Handsinks full option*	15"	7kg	40x52x33cm
BROSSE	Brush sold separately			
DISTSAV	Soap dispenser 300 ml sold separately

Handsinks full option

Ashtrays / Bins

As part of an environmentally-friendly approach, these stainless steel ashtrays and bins can be inconspicuously placed in outdoor locations: building entrances and exits, relaxation areas, patios, etc.

MADE IN FRANCE

WARRANTY 2 YEARS

Wall-mounted ashtray

WILL NO LONGER BE AVAILABLE AS OF 2019

Wall-mounted column ashtray

Bin ashtray

- Discreet
- Ashtray with key closure
- Weather-resistant
- Capacity: 2 or 30 L
- Easily emptied by swinging open the side

Code	Model	Capacity	Weight	Dimensions L x H x W
CENDI	Ashtray in stainless steel	2L	2,5kg	23x23x6cm
CENDIC	Column wall-mounted ashtray in stainless steel	2L	2kg	11x50x6cm
CENDIP	Bin ashtray on stainless steel base	30L	22kg	41,5x90x28,5cm

Aerial disinfection

Aerial misting consists in creating a fog created from billions of droplets sprayed through an air nozzle.

This technique is a powerful method of aerially disinfecting the atmosphere and surface areas, and is ideal for:

- food outlets,
- the food processing industry (packaging room, cutting room, cold storage, storage area),
- the pharmaceutical industry,
- the social and medical sectors (hospital rooms, day nurseries),
- public spaces (airports, gyms, theatres),
- etc.

AEROBIO

Air nozzle

Integrated electronic timer

- Insect disinfestation
- Deodorising effect
- Humidity control
- Easy maintenance
- Can be used with any product
- Operates with a reservoir (non-captive system, no charging, no cartridges)
- Programmable up to 2 h

BRUMISTAR

Code	Model	Power supply	Consumption	Surface area covered	Capacity	Weight	Dimensions L x H x W	Flow rate
AEROBIO	AEROBIO	220V / 50Hz	100W max	100m ³	2L	6kg	33x26x11cm	12 ml/minutes
BRUSI	BRUMISTAR in stainless steel	220V / 50Hz	150W max	500m ³	5L	9kg	35x48,5x25cm	24 ml/minutes

AIR COMFORT AND AIR CONTROL

Air comfort solution: Infrared heaters

Electromagnetic spectrum

Infrared is a part of the electromagnetic spectrum and its rays are characterised by wavelengths longer than those of visible light and UV rays.

There are 3 types of infrared light:

	Wavelengths	Operating temperature
Short-wave IRA	700 – 1 400 nm	2 000°C and above
Medium-wave IRB	1 400 – 3 000 nm	Between 900 and 1 500°C
Long-wave IRC	3 000 – 10 000 nm	

halogen heating ↑

ADVANTAGES OF THE INFRARED HALOGEN HEATER

- **Performance:** The short waves emitted by halogen lamps directly heat solid matter (persons, objects, walls, etc.)..
- **Instantaneous response:** Halogen lamps deliver their output (between 1 000 and 4 500 W) in less than 2 seconds, providing immediate heat.
- **Health:** Ideal for asthmatic persons, this heating method does not stir up the air, thereby avoiding the proliferation of dust mites and particles.
- **Air tightness:** BRC heaters are designed to provide IPX5 protection, enabling it to be used out of doors even in rainy weather.
- **Comfort:** An effective and handy solution for occasional need.
- **Resistance:** The use of authentic (304) stainless steel makes it highly resistant to corrosion and oxidation.

SOLAR HEAT!

Did you know?

The heat given off by the sun is produced by infrared rays, which explains why the warmth is so pleasant and natural

Instantly felt heat

The table below shows the temperature readings off a surface area warmed by 1 500, 3 000 and 4 500 W heaters. These are temperatures measured from various distances (1, 2 and 3 metres), after 60 seconds of exposure at an ambient temperature of 20°C.

	1 500 W	3 000 W	4 500 W
3 metres	24°C	25°C	28°C
2 metres	27°C	30°C	33°C
1 metre	33°C	43°C	54°C

Temperature felt by 1 500 W of radiant heating

Infrared heaters

Infrared thermal radiation generates immediate, pleasurable warmth in solid matter (objects, humans, walls).

It can be used:

Inside:

- Restaurants, pubs, shops
- Places of worship, monuments, exhibition halls
- Gymnasiums
- Workshops, storage warehouses, garages, greenhouses.

Outside:

- Terraces, patios, social functions
- Stadiums, rostrums
- Smoking areas
- Work sites
- Etc.

Directions

- Positioning: 50 cm clear of any obstruction (object, partitions, etc.), adjusted at a height of 2.20 to 4 metres depending on heating output and the heat requirements.
- Tip: for large surface areas, it is advisable to use several evenly spaced medium-intensity radiant heating devices rather than a single higher-powered device.

Optional

- Low-glare lamp.
- 304 stainless steel.
- Adjustable steel stand for single-tube Modell: 1 000, 1 500, 1 800 W (see Accessories on page 45).
- Remote control.

IR 1500

IR 3000

- Silent
- Natural process, no reagents added
- Wall, free-standing, suspended or floor Modells
- Directional
- Interior or exterior use (IPX5)
- Corrosion and rust-proof: austenitic (304) stainless steel
- Available in 7 Leistungen: from 1 000 to 4 500 W

Code	Model	Output	Power supply	Other materials	Weight	Dimensions L x H x W	Standard lamp/ tube reference

AIR COMFORT AND AIR CONTROL

As part of its mission of combating pollutants, BRC has developed solutions for sanitising ambient air and enhancing the comfort of living and work spaces.

Air-control solution: Air purifiers

Comparison of air purification operating systems

	Electrostatic	Photocatalytic	Germicidal
Composition	- electrostatic filter(s) - a pre-filter - a fan - 4-speed transceiver (radio remote control)	- a catalyser (a substrate saturated with titanium dioxide) - UV-A radiation source (T15W tube)	- triboelectric filter media - UV-C radiation (TUV 15W tube)
Operation	Suction and filtration of oil, emulsion and smoke fogs. The air is treated by electrostatic precipitation (the microparticles are given a positive charge and are attracted towards the negative field of the aluminium blades), and then discharged into the area without the loss of heat	By a process referred to as photocatalytic, the pollutant particles are oxidised by titanium dioxide, and transformed into water vapour, carbon dioxide and nitrogen	The air is suctioned in, and the largest particles filtered out and retained by a mechanical filter. The air is then transported within range of the UV-C radiation germicidal tubes, causing the microorganisms to be destroyed
Filtration	Particles $\geq 0,01 \mu$	Particles $\geq 0,01 \mu$	Particles $\geq 0,04 \mu$

Icon legend:

304 stainless steel

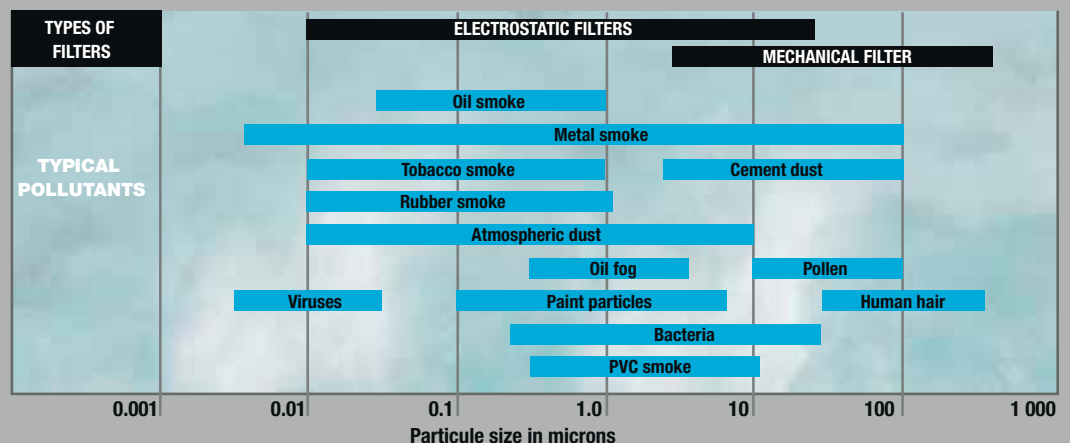

Remote-controlled

How effective is filtration?

The table opposite shows the micron size of several pollutants.

The 3 air purification processes demonstrated are effective in filtering miniscule particles.

As a result, the air is totally decontaminated of smoke, dust, pollen and bacteria.

Electrostatic air purifiers

Ideal for locations requiring pure, allergen-free air, electrostatic air purifiers operate with an axial fan that sucks in ambient air:

- The pre-filter retains all of the coarse impurities present in the air (dust, fibres, etc.).
- The electrostatic filters include an ionising area, where the air-borne micro particles are given a positive electrical charge, and a collection area comprising aluminium blades creating a high-attraction negative electrical field.

The resulting clean air is recycled directly into the usage location, without heat loss and with no modification to the hygienic quality of the air.

Applications: Offices, computing environments, doctors' and vets' surgeries, analysis laboratories, medical and social centres and community areas, food outlets and non-food outlets, restaurant dining rooms, chicha bars, hotels, tourist hubs, discotheques, smoking rooms, etc.

Directions

- Placement: mounted on the wall or attached to the ceiling (in the centre of the room).
- Servicing: electrostatic filter to be cleaned once a month.

AIRNET 1500 and 2100 Ceiling Modell

DELTA Wall Modell

- Air decontamination
- Elimination of air impurities and allergens
- Smoke capture feature
- Remote control-operated (AIRNET)
- No outlet duct required

Code	Model	Power supply	Consumption	Filter	Debit		Weight	Dimensions L x H x W

EPDELTAM	DELTA 1000 wall	220V / 50Hz	120W max	1 electrostatic	1000m ³ /h		21kg	52x27x35cm

Photocatalytic air purifiers

Photocatalysis consists in illuminating a base (substrate) covered with a thin film of titanium dioxide (TiO_2) with an ultraviolet light source. This configuration brings about a physical and chemical reaction that destroys most pollutants present in the air, by transforming them into CO_2 and H_2O . This process has the following advantages: it does not give off energy, does not require additives, leaves no residue and is entirely environmentally friendly.

The photocatalysis is performed under normal temperature and humidity conditions; no special conditions are required.

Applications: Offices, computing environments, doctors' and vets' surgeries, analysis laboratories, medical and social centres and community areas, food outlets and non-food outlets, restaurant dining rooms, chicha bars, hotels, tourist hubs, discotheques, smoking rooms, wine warehouses, fruit and vegetable storehouses, etc.

AIRCAT 1500 and 2100 ceiling Modell

AIRCAT 800 on wheels

TiO_2 particle

Directions

- Placement: mobile on the floor (on wheels) or attached to the ceiling (in the centre of the room).
- Servicing: tubes and substrate to be replaced annually.

- Air decontamination
- Elimination of volatile organic compounds (VOC)
- Total destruction of airborne microorganisms (bacteria, fungi, etc.)
- Treats odours
- Remote control-operated (ceiling model)

Code	Model	Output	Power supply	Consumption	Filter	Debit		Weight	Dimensions L x H x W	Standard lamp/tube reference

EPAIRCA2100	AIRCAT 2100 wall	4X15W	220V / 50Hz	160W max	1 filter + 1 substrate	2100m ³ /h	✓	26kg	60x21x60cm	TUV15W

Germicidal UV air purifiers

Directions

- Placement: mounted on the wall or attached to the ceiling (in the centre of the room).
- Servicing: tubes and filter to be replaced annually.

With the help of a triboelectric filter, germicidal UV air purifiers trap impurities, including submicron particles (as small as 0.04 microns) as well as bacteria, germs, microbes, etc. A germicidal ultraviolet barrier comprised of special tubes continuously exposes the electrostatic filter and all the microorganisms captured to radiation.

This treated air again passes through the ultraviolet beam in order to be totally decontaminated before being recycled.

Applications: Offices, computing environments, doctors' and vets' surgeries, analysis laboratories, medical and social centres and community areas, shops (excluding food outlets, discotheques, smoking rooms, etc.

Air purifier

E-health: How technology can improve health care

- Technology:
 - Mototurbine, touch screen panel, high-quality filtration
 - High-efficiency photocatalysis developed in collaboration with AFNOR Group
- Innovation
 - Real-time filter performance display
 - Continuously monitor the air you breathe
 - Continuous environmental air quality data log (each hour)
 - ACTIV mode: smart unit automatically adapts to your environment
 - Activ oxygen mode: eliminates 100% of odors
- FILTRATION
 - Antibacterial, virucidal and acaricidal pre-filter certified EN1276, EN 14675: developed with a French laboratory
 - PREMIUM EN1822-certified filters

INFORMATIONS ON TECHNICAL CHARACTERISTICS AND STANDARDS

CE Marking

All BRC products are CE and IECCE conform and comply with European and international requirements.

Compliance with European community directives

BRC declares all of its electrical devices to be compliant with the stipulations of the directives:

- 2002/96/CE « WEEE: waste electrical and electronic equipment »
- 2014/30/UE « EMC: electromagnetic compatibility »
- 2014/35/UE « Low-voltage »
- 2011/65/CE « RoHS: Restriction of Hazardous Substances »

Standards / Regulations / Methods / Recycling

The **HACCP (Hazard Analysis Critical Control Point)** method is used to identify, evaluate and manage all hazards likely to occur throughout the food production chain (from receipt of the foodstuff, through storage, to the serving of the food). They are based on a principle of continuous improvement of the measures implemented. HACCP rules are applied as a means of complying with the law. All BRC product characteristics (insect traps and hygiene equipment) meet HACCP requirements.

Adopted by the European Union in 2003, the aim of the **ATEX (Explosive Atmospheres) regulations** is to provide enhanced protection in atmospheres with a high content of organic dust and/or at risk of explosion, by implementing technical and organisational measures.

Definitions of ATEX zones:

EXPLOSIVE ATMOSPHERE	GAS/VAPOUR ZONES	DUST ZONES
Permanent, during normal operations	0	20
Occasional, during normal operations	1	21
Accidental, during normal operations	2	22

BRC offers the VORTEX insect trap (page 29), made of components protected by an unbreakable quartz glass and providing excellent UV radiation transmission. The VORTEX is designed for zones 1-21 and 2-22.

Directive 2004/108/CE requires all electrical or electronic products sold on the European market to be in compliance with the **electromagnetic compatibility standard (ECM)**. Its aim is both to limit electromagnetic disturbances emitted by the device and to protect the device against disturbances from other equipment and from the environment.

The aim of the **RoHS (Restriction of Hazardous Substances)** directive 2011/65/CE is to restrict the use of six hazardous substances in electrical and electronic equipment: mercury, lead, cadmium, hexavalent chrome, polybrominated biphenyls and polybrominated diphenyl ethers.

As part of its exercise in corporate responsibility, the not-for-profit eco-organisation Recyclum is responsible for the collection and recycling of used lamps and waste electrical and electronic equipment (WEEE). There are collection points (distributors, recycling centres, etc.), or the waste can be collected directly from the owners.

WEEE regulations arising out of European directive 2002/96/CE pertains to the **recycling of waste electrical and electronic equipment (WEEE)**.

The **French Health Compliance Certification (ACS)** is an official approval delivered by the Directorate-General for Health Care, and became compulsory in France on 24 December 2006. It applies to the component materials of equipment that come into contact with water intended for human consumption and also applies to the equipment itself (referred to as "accessories" in the device).

Certification bodies and laboratories

Electrical and electronic product compliance

Specialists in environmental testing of equipment for CE marking, EMC, electrical safety, etc.

Industrial product analysis and testing

Certification and inspection of electrical and electronic products and industrial safety (ATEX)

Stainless steel

Stainless steel has varying degrees of corrosion-resistance depending on its composition.

The presence of chrome (Cr) and molybdenum (Mo) increases its anti-corrosive properties in harsh environments.

S.STEEL	Cr	Ni	Mo	Environment
430	17 %			Food processing industries, kitchens
304	18 %	9 %		+ chemical industries
316	18 %	13 %	2 %	+ petroleum and pharmaceutical industries, marine environments

Resistance of ferritic / austenitic steel to localised corrosion

BRC offers 430 and 304 stainless steel and can also design equipment in 316 stainless steel on request

International protection rating (IP)

This is an international standard pertaining to sealing effectiveness.

BRC products have 4 different levels of protection:

- **IP 20:**
Protects the device from solid matter larger than 12 mm and no protection against liquid body.
- **IP 21:**
Protects the device from solid matter larger than 12 mm and from vertically falling drops of water.
- **IP 54:**
Protects the device from dust and water spray from any direction.
- **IP 65:**
Protects the device from dust and from water jets sprayed from any direction (22.5 mm nozzle, 12.5 l/m).

DEGREE OF PROTECTION against ingress of solid matter		DEGREE OF PROTECTION against ingress of liquid matter	
0	No protection	0	No protection
1	Protects against ingress of solid foreign bodies larger than 50 mm	1	Protects against vertically falling drops of water
2	Protects against ingress of solid foreign bodies larger than 12 mm	2	Protects against vertically falling drops of water when the impact surface is tilted at a maximum angle of 15°
3	Protects against ingress of solid foreign bodies larger than 2.5 mm	3	Protects against vertically falling drops of water when the impact surface is tilted at a maximum angle of 60°
4	Protects against ingress of solid foreign bodies larger than 1 mm	4	Protects against splashes coming from any direction
5	Protects against dust (no harmful deposits)	5	Protects against water projected from any direction (no harmful effect)
6	Complete protection from ingress of dust	6	Protects against water projected in powerful jets from any direction (no harmful effect)
		7	Protects against the effects of immersion in water 15 cm to 1 m deep
		8	Protects against prolonged immersion under pressure

IK rating

This rating determines the degree to which a device is able to resist mechanical shocks, according to standard NF C 20-010. It is measured on a scale of 0 to 10 based on the impact energy which can range from 0 to 20 joules.

IK Code	IK00	IK01	IK02	IK03	IK04	IK05	IK06	IK07	IK08	IK09	IK10
Impact energy (J)	-	0,15	0,2	0,35	0,5	0,7	1	2	5	10	20

Among its range of insect traps, BRC has designed the VORTEX with an IK09 rating, that is, a resistance to impact energy of 10 J.

Categories of electrical devices

All electrical equipment, when connected to a power source, must have protection against electric shocks that is adequate for the conditions on the premises.

There are 2 types of electrical protection:

- The main protection against the risks of direct contact.
- Additional protection against the risks of indirect contact.

The table below shows the stipulations corresponding to the category of equipment

Class of equipment	Stipulation for protection		
	Main protection in the equipment	Additional protection in the equipment	Additional protection on the premises
0	Main insulation	-	Environment (non-conductive premises)
I	Main insulation	The equipment is actually earthed (*) to each other and to the connection devices on the external protective conductor (ground terminal)	Automatic power shut-down by ground conductor and related automatic protective device
II	Main insulation or Double or enhanced insulation	Additional insulation	-
III	Limitation of voltage	-	Separation of the protection from all other circuits

(*) Earth: the conductive part of a piece of electrical equipment that is likely to be touched, which is not normally live but can become so in the event of a fault, particularly when the main insulation fails.

All BRC electrical devices are class I devices.

1 – Orders

- All orders automatically imply acceptance of the present terms and conditions of sale supplemented, where applicable, by our specific conditions. Any conditions to the contrary, which may be stipulated by the buyer in his terms and conditions of purchase, are cancelled by the present terms and conditions and deemed null and void for our part.
- Orders sent to us are understood to be subject to our acceptance, and a refusal by us must be justified within 30 days of receipt of the order.
 - Orders accepted cannot be cancelled, even in part, without our written agreement.
 - In the case of special orders, no modifications to the order shall be allowed.
 - The information provided in the catalogues, instruction leaflets, price lists and other non-contractual documents is by way of reference only and cannot render us liable.

2 – Price

- The applicable price shall be either the one indicated in our quotation or, for regular products kept in stock, the one shown on the pricelist in effect as at the date of the order.
- This price shall be fixed so long as delivery is made within a maximum of one month of placement of the order. Should this deadline be exceeded for any reason beyond our control, the buyer shall be notified of the new pricelist in effect, or the new prices applicable to specific products, which, failing a written objection by the buyer within one week, shall be considered to have been accepted.
- This price is quoted exclusive of tax, ex-factory, unless subject to specific agreement, and cannot be. The packaging is determined and prepared by us, unless otherwise agreed upon, and will not be altered.
 - The total amount for the merchandise, which appears on each invoice, shall be subject to charges, the amounts of which can be shown to the buyer on request.

3 – Payment

- Our invoices are payable in cash on delivery, unless subject to a specific agreement between the parties.
- We reserve the right to request a deposit of at least 30% on the cost of the order. In the event that the customer cancels the order without a written agreement from us, the deposit paid is retained by us, without prejudice to full payment of the cost corresponding to the portion of the order already completed.
- In a case of part-delivery, non-delivery or deferment of delivery of the remaining merchandise shall not delay settlement of the portion delivered.
- Similarly, if a cause for litigation or a difference in the amount or due date is determined, this can only be resolved by way of a credit note or a part-payment jointly agreed to with our accounting department, and on no account by way of non-settlement on the due date.
- Any invoice, a duplicate of which has not been requested from us within a period of one month following delivery, shall be deemed to have been received by the buyer.
- As a rule, non-settlement of an invoice due for payment, or failure to return a bill of exchange by the legal deadline can lead to suspended processing of the order and suspended delivery of all pending orders.
- Any delay in payment past the contractual due date shall give rise to application of Article L-441-6 of the commercial code. Fixed damages in the amount of 40 dollars shall be automatically payable, as well as additional collection charges, without prior formal notification. In addition, under the provisions of the New Economic Regulations Act, a penalty equal to the increased ECB (European Central Bank) rate of 10 points shall be claimed in respect of late-payment interest.

4 – Delivery

- Products are loaded under the responsibility of the person operating the vehicle.
- By express agreement, the unloading at the delivery location is exclusively the responsibility of the buyer and is carried out under his supervision, irrespective of any assistance our driver or the driver of the carrier company chosen by us may render.
- The supervision of the products shall be passed to the buyer upon arrival of the products at the buyer's warehouses. However, if he has organised the transport, supervision shall be transferred to the buyer's carrier prior to loading the products into our warehouses.
- The buyer agrees to take delivery of the product at the location and on the date given by us. Should the buyer fail to act, the delivery and all the effects thereof shall be deemed to have taken place on this date.

- Delivery lead times are given as an indication only, and failure to observe such cannot incur late penalties, cancellation of the order or a deferment of payment.
- All additional costs incurred by lateness beyond our control in the execution of a delivery shall be borne by the buyer.
- Force majeure, drafting, war, strikes, lock-outs, epidemics, lack of materials, fire, flood, equipment accidents or other causes resulting in the total or partial closure or disorganisation of the factories to which our orders are sent, absolve us of any duty to provide the products whose manufacture has been suspended.
- No claim for non-compliance or apparent defects in products shall be accepted after a period of one week from the date of their delivery.
- In addition, the buyer agrees, in the event of a partial loss or damage incurred during transport, to issue within a period of three days from the date of receipt of the products, all justified reservations against the carrier via registered letter with proof of delivery, failing which the claim will be rejected.

5 – Warranty

- Our devices carry warranties of 1 to 5 years against any defects in workmanship or manufacturing (depending on the model) from the invoice date (except for consumable items). The warranty is limited to replacement of the defective part at our factory and at our expense. This warranty applies subject to our agreement only, and if the defective part or the entire device is returned to us carriage and packaging paid. The warranty is invalid in the event of damage caused by improper use of the device. Devices are re-shipped carriage paid. No indemnity may be requested by way of damages for any reason whatsoever.

6 – Return of merchandise

- Returned merchandise is accepted only if we have authorised this beforehand. The cost of returns is borne by the customer and can only apply to merchandise in the perfectly new condition, in its original packaging.
- Returned merchandise is credited to the purchaser in the form of a non-redeemable credit note.
- Manufactured parts (special orders) can under no circumstances be returned.

7 – Retention of ownership

- We expressly retain ownership of the products sold until the day they are fully paid for, with the stipulation that under the provisions of the present clause, only actual collection of cheques and commercial papers shall constitute payment.
- Notwithstanding the present clause, the goods sold shall be at the risk of the buyer the moment they leave our factory.
- The buyer also declares himself to be fully aware of Act no.80335 of 12 May 1980.

8 – Contract revision

- Any knowledge of a major change in the economic or financial status of the purchaser, even after partial execution of the orders may result in a revision of the conditions for executing these orders, as well as the overall terms of credit granted to the buyer.
- We also reserve the right at any time to request guarantees for the settlement of our invoices.

9 – Contract cancellation

The sale shall be automatically cancelled without no other formality than a simple final notice sent to the buyer which, if it remains without response for more than two weeks, shall release us from any obligations in the event of non-payment of an instalment at the agreed due date, as well as in the event of non-compliance with any one of the obligations stipulated in the present terms and conditions of sale or in the special terms of the sale.

10 – Assignment of jurisdiction

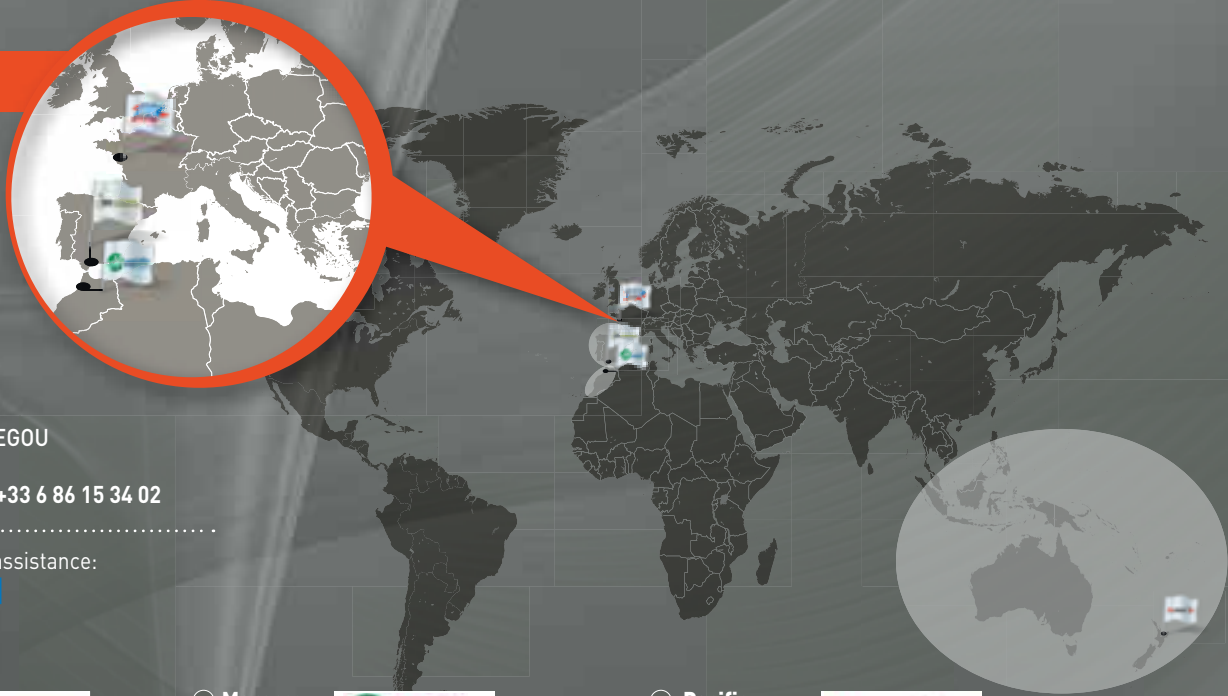

In the event of a dispute, only the commercial court for our company's corporate headquarters shall be competent to adjudicate, even in a case of multiple defendants or recourse under warranty
