

# Eagle Eye Installation and Positioning

## Eagle Eye Installation:

Eagle Eye requires the correct number of units, appropriate positioning and regular maintenance in order to function correctly and deter pest bird species. There are a series of variables in every situation and an accredited professional installer is experienced in the products use and receives annual training and updates to remain accredited.

## Commercial and industrial buildings:

As mentioned throughout this website, Eagle Eye must be installed by Accredited Eagle Eye installers when the system is to be used on commercial and industrial buildings. We can assist your facility with product specifications, technical information and an outline of a program to assist. You are welcome to email or fax the details of your facility, outlining the following:

- Type facility
- Location (an address allows us to view the orchard on Google™ Earth)
- Species of pest birds
- Photos or drawings of the facility indicating true north
- Location of trees or any structures that will create a shadow between the units and the area to be covered
- Current bird disturbance or devices in place
- Any additional comments to assist

## Horticultural crops:

For horticultural crops, kits are available and can be self-installed by growers in order to deter damaging pest birds. We offer a free orchard plan to accompany the units to ensure correct placement, number of units and configurations are achieved. You can email or fax your orchard layout, outlining the following:

- Type and height of crop
- Location (an address allows us to view the orchard on Google™ Earth)
- Species of pest birds
- True north
- Orchard dimensions
- Inter-row spacing
- Location of windbreaks or large trees within the orchard
- Current bird disturbance or devices in place
- Any additional comments to assist

### Need an accredited installer?

There is a network of independent Accredited Eagle Eye Installers in each state of Australia and in New Zealand. To find a one in your area, please contact us on **1300 66 56 57**.

### Want to become an accredited installer?

We believe, as do many installers that Eagle Eye is the best open space bird deterrent system available. We regularly hold accreditation training throughout Australia and have several planned throughout Australia soon. Contact us on **1300 66 56 57** to register your interest or to learn more about this exciting system.

The Eagle Eye LED Light Kit (left) is used to add additional light for deterring pest birds in low light situations such as dawn, dusk, night or areas of low solar intensity.

Use with the Eagle Eye 240v Outdoor Kit (below).
