Eagle Eye Product Comparison:

Bird Breezer:

The Bird Breezer unit is a wind-driven motion deterrent that prevents birds from landing directly next to it.

Flashes: Although the unit is highly visible, it does not emit flashes.

Effective Radius: up to 2m (6ft)

When to use: Specific landing areas like chimneys, small sections of roof-peaks, window-sills, etc.

The Bird Breezer unit is ideal to use where flashing devices may be an irritation to neighbours.

Bird Breezer FLASH:

		Scale (1-10):	1	2	3	4	5	6	7	8	9	10
		Max effective radius:										
		Reflection intensity:										
		Neighbour friendly:										
	1	iteloiseur menury.										

The **Bird Breezer Flash** unit is a wind-driven, motion, and reflective deterrent that prevents birds from landing nearby. **Flashes:** The unit emits low-medium intensity flashes in all directions.

Effective Radius: up to 8m (25ft)

When to use: Pergolas, roof peaks, flat roof sections, agriculture, solar panel installations, vegetable gardens, etc.

Although the unit emits flashes, it has the lowest risk of irritation of all our reflective products.

Colour options: Silver & Gold for land birds, Red, Silver & Gold for seabirds.

Pro-Peller:

The **Pro-Peller** unit is a wind-driven, motion- and highly reflective deterrent that deters approaching birds from unwanted areas.

Flashes: The unit emits medium-high intensity flashes and strobes in all directions.

Effective Radius: up to 15m (50ft)

When to use: This unit is ideal for agriculture as well as homes & gardens in areas where there is no risk of irritation to the neighbours. Also, place one Pro-Peller unit between two adjacent Eagle Eye units on larger properties for added effectiveness.

Colour options: Silver & Gold for land birds, Red for seabirds.

The **Eagle Eye** unit has a wind-driven or 12v motorized option and is a highly reflective deterrent that deters approaching birds from unwanted areas.

Flashes: The unit emits high-intensity flashes and strobes in mostly horizontal and downward directions.

Effective Radius: up to 30m (100ft)

When to use: This unit is used when large areas need protection from approaching birds. The Eagle Eye is mainly used at commercial properties, warehouses, and factories. The Eagle Eye is also used at medium-large homes, but only in areas where there is no risk of irritation to the neighbours.

Colour options: Silver & Gold for land birds, Red for seabirds.
